Aprašymas

We are looking for a **Backend Engineer** with strong **Golang** experience to support the development and migration of a fast-growing **SaaS** product in the **marketplace** sector. The role involves contributing to scalable backend services in a flexible, collaborative setup. Occasional on-site work in **Vilnius** may be expected.

Key Responsibilities:

- Develop and maintain backend services using **Golang**.
- Support migration activities for a growing **SaaS** product.
- Collaborate with cross-functional teams to ensure scalable and reliable backend delivery.
- Participate in technical and culture-fit interviews as part of the selection process.

Must-Have Requirements:

- Strong hands-on experience with **Golang** backend development.
- Experience working on **SaaS** products or scalable backend systems.
- Ability to work flexibly in a changing project environment.
- Lithuanian language skills and availability for occasional office work in **Vilnius**.
