Aprašymas

We are looking for a **Mid/Senior Java Developer** to join a long-term **fintech/banking** project. The role involves designing and developing scalable backend solutions using **Java 21** and **Spring Boot**, working within a **microservices architecture**, and ensuring high performance and reliability of backend systems. The ideal candidate brings hands-on experience with **REST API** development, **cloud** environments (**AWS**), and modern **DevOps** practices, and holds valid residency in Lithuania, Latvia, or Estonia (citizenship required; background check applies).

Key Responsibilities:

- Design and develop scalable, high-performance backend systems using **Java 21** and **Spring Boot**
- Build and optimize **REST APIs** following best practices in software architecture
- Work within a **microservices architecture**, ensuring modularity and maintainability
- Manage builds and dependencies using **Gradle**
- Write and maintain automated tests using **JUnit**, **Mockito**, and **AssertJ**
- Ensure code quality through **SonarQube** analysis and code review processes
- Work with **GitLab** for version control and **CI/CD** pipeline management
- Containerize and deploy services using **Docker**

on **AWS**

- Implement logging with **Logback** / **SLF4J** and monitor systems via **Grafana**
- Handle asynchronous event-driven communication using **Kafka**
- Work with **PostgreSQL** as the primary database and **Redis** for caching
- Apply strong security principles and best practices throughout the development lifecycle
- Collaborate closely with cross-functional teams in an agile environment

Must-Have Requirements:

- Proven professional experience in **Java** development with a strong technical background
- Proficiency in **Java 21** and **Spring Boot**
- Experience with **Gradle** as a build and dependency management tool
- Hands-on experience with **JUnit**, **Mockito**, and **AssertJ** for testing
- Familiarity with **SonarQube** for code quality assurance
- Solid experience with **GitLab** and **CI/CD** pipelines
- Experience with **Docker** containerization
- Hands-on experience with **AWS** cloud services
- Knowledge of **Logback** and **SLF4J** for logging
- Experience with **Grafana** for system monitoring
- Working knowledge of **Kafka** for messaging and event streaming
- Proficiency with **PostgreSQL** and **Redis**
- Expertise in solution design and **microservices architecture**
- Strong understanding of security principles and best practices in software development
- Knowledge of **DevOps** practices and related tooling
- Strong problem-solving and analytical skills with a collaborative mindset
- Lithuanian, Latvian, or Estonian citizenship (residency requirement; BGC required)
- Fluency in **English**

Nice to Have:

- Prior experience working on **fintech** projects

Required Skills
