Description

We are looking for an experienced Quality Assurance consultant to lead all **QA** efforts for a core platform delinquency team operating in a **banking** environment. The role combines thorough **manual testing** with building and maintaining **test automation** in **Java** using **Selenium / Selenide**. You will establish robust testing practices for highly **complex systems**, ensuring reliable delivery and continuous quality improvement across the platform.

Key Responsibilities:

- Plan and execute comprehensive **manual tests** across new and existing functionality.
- Design, develop, and maintain **Java-based test automation** frameworks leveraging **Selenium/Selenide**.
- Own the full **quality assurance** lifecycle: test planning, execution, reporting, and defect tracking.
- Collaborate with engineering and product stakeholders to align on quality goals and release timelines.
- Champion **QA** best practices and foster a culture of quality within the team.

Must-Have Requirements:

- Demonstrated background testing **complex systems** in demanding business contexts.
- Proficiency in **Java** for building **test automation** solutions.
- Deep knowledge of **Selenium / Selenide** frameworks.
- Ability to manage **QA** activities independently and proactively.
- Solid experience in **manual testing** and strong analytical problem-solving skills.

Nice to Have:

- Excellent communication skills for effective stakeholder interaction.
- Strong stress tolerance in fast-paced environments.
