Apie Mane

For most of the time I have been working as a technical
consultant with insurance application based on Oracle
technologies (DB, SOA) and as integration designer at
IBM. I began as a developer and gradually gained
consultancy skills. As consultant I found joy to be a
bridge between business and IT and impact solutions
being implemented. I was able to learn from the best
colleagues with many years of experience in
implementation projects and consulting. In future I see
myself moving to architect role.

My main skill set is in analysis, consulting, architecture
and design of various solutions as well as their
integration, development. I have worked with standard
solution which had to be customized to fit every
customer's needs. Such tasks require close cooperation
with business and are perfect for understanding their
desires and transforming those into systems
functionality, hence I gained a lot of experience, an
open minded thinking for flexible problem solving where
everything has to be accounted for and well designed.
