Personal Statement

In short: I am a .NET / SQL web developer with tons of experience in handling high pressure / attention to detail situations. I am specializing in data access layer, so forth the concept of multi-tenancy is one of my main areas of interest.

I am not complicating things when it is not necessary. Concept of software development patterns is not new me for me either.

I do not rush to solve problems as i think that rushing into things can cause a lot of mistakes, especially at the enterprise level.

References as well as code snippets are available on request.
